

SUPPORT FOR AMENDMENTS TO SPECIFICATION:

MPEP: 2163.07(a) “Inherent Function, Theory, or Advantage. By disclosing in a patent application a device that inherently performs a function or had a property, operates according to a theory or has an advantage, a patent application necessarily discloses that function, theory or advantage, even though it says nothing explicit concerning it. The application may later be amended to recite the function, theory or advantage without introducing prohibited new matter.”

The primary changes to the specification are that many of the terms used in the claims have been defined or clarified. Terms to identify phrases like “earth’s horizon,” “apparent gravity horizon”, ‘payload platform”, “sensor package” “level sensor” as well as a more thorough understanding of the previously stated relationships between the sensors and how they effect the stabilization of the device, have been added to better define the invention.
